

WIRELESS DESIGN DONE RIGHT

*On time. On budget.
The first time. Every time.*

Custom design by Connected Development

In today's economy, you can't afford to move slowly, or spend fortunes getting up to speed on a new technology. That's why Connected Development employs an experienced team of experts to design your product right from the start.

Any or all

Whether you're in the concept phase or already have a complete design in mind, Connected Development has the right offerings to help make your project a success. From requirements definition to design review and expert consulting, the experienced wireless team at Connected Development is at your service to bring your ideas to life.

Nuts and bolts

Successful wireless hardware design requires precision. Our hardware team has the expertise to implement your designs through state of the art tools and extensive baseband, RF, mechanical and industrialization experience.

We speak your language.

The Connected Development software team is prepared to design your embedded application using either Agile development or a traditional incremental process using the embedded language you choose, including C, C++, Java, Perl and more.

Take your project to the next level.

YOUR ALLIES IN WIRELESS DESIGN

Don't waste another minute getting up to speed on a new technology. Let Connected Development design all or any part of your wireless solution.

Marquee services

Turnkey or a la carte product design and project management services from Connected Development include:

- Design review
- Expert consulting
- Mechanical design
- Custom antenna design
- Antenna performance evaluation
- Custom firmware design
- Software application design

In addition, we offer comprehensive certification and manufacturing services so you can go from concept to commercial with the team you trust.

Why Connected Development?

We're passionate about your success, and we understand that how we do business is just as important as what we do. That's why we value predictability and responsiveness and relentlessly pursue positive relationships with every member of the wireless and M2M community.

It's our mission to leverage our expertise, experience and partnerships to provide comprehensive design, certification and consulting services that enable M2M customers to bring new innovations to market fast, manage risk and position themselves for success.

Service	Details
Cellular protocols	GSM: GPRS, EDGE, UMTS, HSPA CDMA: 1xRTT, EV-DO
Other wireless	Satellite, Wi-Fi, Bluetooth, Zigbee, Private RF, WiMax
Software development	ARM, Linux, C, C++, C#, Java, Perl, Open AT, Visual Studio, Eclipse, M2M Developer Suite, more*
Hardware design	CAD, Design for Manufacturability, Baseband, RF, ESD protection, Prototype execution and evaluation
Project management	Requirements definition and review, Agile (Scrum) or Traditional Incremental Development, Test-driven development, Individual project reporting and security, including defect tracking and resolution, Personalized and secure Wiki space for project update reporting and status, Weekly project status reporting
Manufacturing**	Prototyping, Logistics, Process engineering, Procurement, Manufacturing test development, Quality systems, Activation, Provisioning

* Call for details. ** Manufacturing services provided through partnerships with leading contract manufacturers.
